Management Discussion of Fund Performance

Results of Operations

For the six-month period ended June 30, 2023, the NBI Canadian Equity Private Portfolio's Advisor Series units returned 5.36% compared to 5.70% for the Fund's benchmark, the S&P/TSX Composite Index (CAD). Unlike the benchmark, the Fund's performance is calculated after fees and expenses. Please see the *Past Performance* section for the returns of all of the Fund's series, which may vary mainly because of fees and expenses.

Certain series of the Fund, as applicable, may make distributions at a rate determined by the manager. This rate may change from time to time. If the aggregate amount of distributions in such series exceeds the portion of net income and net realized capital gains allocated to such series, the excess will constitute a return of capital. The manager does not believe that the return of capital distributions made by such series of the Fund have a meaningful impact on the Fund's ability to implement its investment strategy or to fulfill its investment objective.

The Fund's net asset value rose by 5.16% over the period, from \$1.151 billion as at December 31, 2022 to \$1.210 billion as at June 30, 2023.

Canada's stock market posted a solid return in the first half of 2023 amid a broader recovery in investor sentiment. However, in contrast to 2021 and 2022, it trailed its global peers. As is typically the case, the unique construction of the nation's major indexes was the key factor in relative performance. Canada was hurt by its large weighting in energy stocks, which underperformed as oil prices came under pressure from concerns about the demand outlook. The prospect of slower growth weighed on mining and rail stocks, as well. Financials, while holding up reasonably well despite instability in the global banking sector, also lagged somewhat due in part to the inverted yield curve. Not least, the country's lower allocation to technology stocks pressured relative results given the sector's outsized gains. On the plus side, Canada's inflation rate fell to 3.4% in May – its lowest level since June 2021. Although the Bank of Canada surprised the markets with a quarter-point rate hike in early June, the downtrend in inflation fueled hopes that the bank may soon shift to a neutral policy.

The Fund underperformed the benchmark by a small margin during the period, with an underweight in energy and overweight and stock selection within the industrials sector the main driver of relative performance. In energy, after declining more than 30% over the course of 2022, North American (and global) oil prices continued to drift downward in a somewhat directionless market in 2023, where the energy equity market in Canada proved somewhat resilient, limiting declines to 2-3% for the period. In industrials, cyclical performers Boyd Group Services Inc and Finning International Inc. advanced during the quarter, with Boyd reporting first quarter earnings that were ahead of consensus, reflecting strong demand and solid execution by management in what remains an uncertain operating environment.

Recent Developments

Representing somewhat of a contrarian purchase, the Fund initiated a position in Cogeco Communications Inc. during the period after a healthy look through on the recovery in US cable stocks. The Fund also purchased Waste Connections Inc. during a correction which bottomed in early June.

The Fund sold its investments in Lumine Group Inc. and Magna International Inc. Received as a result of the spin out from Constellation Software, shares in Lumine Group were sold given the expensive valuation and relatively small weighting within the portfolio. The Fund exited Magna on concerns related to the significant shift in the company's investment strategy.

In terms of positioning, the portfolio remains acutely focused on cash flows and valuations and the portfolio advisor used the strong start of the year to trim names that outperformed and redeploy into positions that lagged.

Equity markets generated stronger gains in the first half of 2023 than was probably anticipated six months ago, especially in the U.S. A strong job market and excess pandemic savings help explain the resiliency of the consumer despite higher interest rates and elevated (and "sticky") inflation. In addition, most of these market advances have come on the heels of multiples expansion as opposed to earnings growth, with earnings growth turning negative in recent quarters. But while the North American economy, including Canada, has avoided a recession, the risk, however small, remains there given monetary tightening that continues to make its way through the economy – tightening that would only be eased slowly given "sticky" inflationary pressures that exist in many core measures. On the corporate fundamentals side, while the higher rate environment is starting to have an impact on bottom line results, stronger economic activity has continued to support a healthy top line, where companies have responded by cutting costs through downsizing workforces. From a valuations' perspective, while U.S. markets are nearly fully priced for a soft landing for the economy, Canadian markets have a bit more breathing room where earnings yields remain higher than those offered by corporate bonds and cash equivalents.

On May 1, 2023, the Fund's independent review committee (the "IRC") was increased to four members when Stéphanie Raymond-Bougie was appointed as IRC member.

The Series O was launched for the Fund on May 29, 2023.

The fees are calculated based on a percentage of the Fund's daily net asset value before applicable taxes and are paid on a monthly basis. Under the *Distribution* heading, expenses include the broker's compensation consisting of the maximum annual trailer fees and sales commissions paid to brokers. Under the *Other* heading, the fees relate mainly to investment management, investment advisory services, general administration and profit.

The management fees paid by the Fund only cover management of fund investments, i.e. the fees related to management of fund portfolios constituting the profiles of the NBI Private Wealth Management service ("PWM"). General administration services, trailer fees and sale commissions paid to brokers are covered by the PWM's service fees, which are paid directly by investors. The breakdown of major services provided in consideration of the management fees, expressed as an approximate percentage of the management fees is as follows:

Past Performance

The performance of each series of the Fund is presented below and calculated as at December 31 of each year. It assumes that all distributions made in the periods shown were reinvested in additional securities and does not take into account sales, redemption charges, distributions, or optional charges that would have reduced returns. Past performance of a series of a Fund does not necessarily indicate how it will perform in the future.

Annual Returns

The bar charts indicate the performance for each the Fund's series in existence greater than one year during the years shown, and illustrate how the performance has changed from year to year. They show, in percentage terms, how much an investment made on January 1 (or made commencing from the start of the series) would have grown or decreased by December 31 of that year, in the case of the Annual management report of fund performance, or by June 30, in the case of the Interim management report of fund performance.

⁽¹⁾ Returns for the period from May 21, 2015 (commencement of operations) to December 31, 2015.

⁽²⁾ Returns for the period from July 14, 2015 (commencement of operations) to December 31, 2015.

⁽³⁾ Returns for the period from October 30, 2015 (commencement of operations) to December 31, 2015.

⁽⁵⁾ This information is derived from the Fund's Annual Audited Financial Statements and Interim Unaudited Financial Statements. The net assets per unit presented in the financial statements might differ from the net asset value calculated for fund pricing purposes. The differences are explained in the notes to the financial statements.

⁽⁶⁾ Net assets and distributions are based on the actual number of units outstanding at the relevant time. The increase or decrease from operations is based on the average number of units outstanding over the accounting period.

⁽⁷⁾ Distributions were paid in cash or reinvested in additional units of the Fund, or both.

^(a) The net assets are calculated in accordance with IFRS.

⁽⁵⁾ This information is provided as at the last day of the accounting period shown.

⁽⁶⁾ Management expense ratio is based on total expenses including sales taxes for the accounting period indicated (excluding commission, other portfolio transaction costs and withholding taxes) and is expressed as an annualized percentage of daily average net value during the accounting period.

⁽⁷⁾ The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net asset value during the accounting period. The trading expense ratio includes, if necessary, the trading expenses from its underlying funds, as described in Article 15.2 of Regulation 81-106.

⁽⁸⁾ The Fund's portfolio turnover rate indicates how actively the Fund portfolio's manager manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the accounting period. The higher a Fund's portfolio turnover rate in an accounting period, the greater the trading costs payable by the Fund in the accounting period, and the greater the chance of an investor receiving taxable capital gains in the accounting period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.
